If you had a USB thumb drive connected when the message appears, or you have WINDOWS XP on a DVD. On the C: drive, check for the WINDOWS XP folder. At C:\WINDOWS\explorer.exe, look for the boot.ini file. Find the file in the Windows XP folder in the C: Drive. Right-click on the file, and select "Copy" or "Save" as image. Remove the USB thumb drive and insert a CD/DVD. Go to WINDOWS XP CD/DVD, select Start Run, type in mshw.cpl, and click OK. In the Hardware list, find the "Hard Drive" and then click on "Change". Click on the new drive icon, then select "Tools" or "Help" to access Windows XP "Edit/Recovery Console". From the command line, type "FixBoot" and then hit ENTER. Reboot the computer.

1. Field of the Invention The invention relates to active illumination devices for penetrating a cover in a firearm, and more particularly to a passive infrared illumination device having means for limiting the illumination of the firearm in a non-ambulatory weapon mode. 2. Description of the Prior Art Active illumination devices are well known in the art for illuminating a firearm to facilitate a sighting operation. One type of active illumination device includes an infrared light source such as a light emitting diode disposed on the exterior of a firearm. The infrared light source can be energized or de-energized in a known manner to transmit light towards a target. A problem associated with active illumination devices is that the energy of the infrared light source can remain in the light stream longer than needed to illuminate the target. As such, the active illumination device can be energized when the firearm 82157476af
